

## **Working Prototype Known Problems Report**

**Product Name: Script Scribble**

**Team Name: Scribblers**

**Date: 11/29/17**

### **List of Functions Not Working:**

1. Nesting blocks within other blocks doesn't appear right (the outer one doesn't stretch to fit the inner ones)
2. The snapping together of blocks doesn't work right on every screen resolution
3. If, Else, and While blocks (and by extension condition and relation blocks) don't work properly due to the snapping into place not functionally working
4. Dragging the block you want to drag when they're all snapped together is sometimes tough because every image is 256x256, and we do collision detection with the touch and the image by just using the image dimensions
